StudyStudio: Your cheapest 24/7 study partner.

Study smarter, not harder. StudyStudio is your ultimate study companion, providing 24/7 support, personalized learning, and advanced AI tools.

Introducing **StudyStudio**, an educational SaaS platform powered by Gemini that lets students and parents create personalized AI tutors for any subject. With StudyStudio, say goodbye to high tutoring costs and hello to flexible, on-demand learning. This intuitive platform makes it easy to tailor AI tutors to specific coursework needs, allowing users to chat and learn at their own pace. Built with Next.js, React, and Gemini StudyStudio is your ultimate tool to transform tutoring, making education accessible, customizable, and affordable.

How It Works

Live demo [here](#).

The app is powered by:

-  [Gemini](#) for AI tutoring and fine-tuning
-  [React](#) for user interface
-  [Next.js](#) for app and landing page
-  [Neon](#) (Postgres) for database
-  [Clerk](#) for authentication
-  [Drizzle](#) ORM for database management

1

Provide your input

Select your use-case scenario and submit your input.

AI Coursework

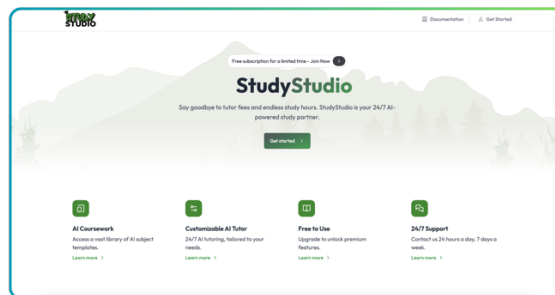

AI Tutor

2

Our AI gets to work

The AI processing takes some time. Be patient.

3

Get amazing results

You will receive accurate and concise responses tailored to your needs.

Getting Started

This section will guide you through the options available to install StudyStudio.

To perform the installation, follow the brand-new documentation here: [Documentation Link](#)

To start using StudyStudio, you need to select an environment first:

1. Local Environment
2. Production Environment
3. Custom Server Environment (Traditional Approach)

Currently using StudyStudio without using one of these built-in environments is not possible.

1. Local Environment

This environment is for users who don't want to host StudyStudio. This section contains the following steps to ensure proper installation.

- Getting Started
- Environment Variables
- AI Service
- Clerk
- Payment Gateways
- Drizzle
- Database
- Google Analytics
- Starting Server
- Authentication
- Stopping Server

2. Production Environment

This section will guide you through the final setup and deploying the application on Vercel.

- Getting Started
- Environment Variables
- AI Service
- Clerk
- Payment Gateways
- Database
- Google Analytics
- Deployment
- Customization

3. Custom Server Environment

This section will guide you through the final setup and deploying the application on any of your servers with the following hosting types (i.e. Shared Hosting, Dedicated Hosting, VPS Hosting).

- Getting Started
- Environment Variables
- AI Service
- Clerk
- Payment Gateways
- Database
- Google Analytics
- Deployment
- Customization
